

Sighting vs Stinging

This bivariate map compares jellyfish reporting intensity with potential sting impact. Reporting intensity is represented by total sightings per county, while sting impact is estimated using a species-based sting score.

A. aurita and *Rhizostoma* spp. were scored 1, *C. lamarckii* and *C. hysoscella* were scored 2, and *C. capillata* and *P. noctiluca* were scored 3.
